

» icoya OpenContent for SAP Enterprise Portal

The optimal web content management system for SAP Enterprise Portal

With icoya OpenContent for SAP Enterprise Portal, struktur AG offers a flexible and result-oriented solution that fully integrates all expected demands in compiling, managing, and transmitting of information in the Internet and the Intranet.

The advantages of web content management with icoya OpenContent for SAP Enterprise Portal are clear: with icoya OpenContent, company web appearances are managed and maintained within the standardized environment of the SAP Enterprise Portal. SAP Enterprise Portal users can add and manage content, as well as retrieve information, dependent upon companywide access rights and authorization processes. Application integration is seamless: icoya OpenContent is bound to the Enterprise Portal over SAP iView technology. Single-Sign-On automatically registers members in the Internet management system. In the release process design, icoya OpenContent presents the utmost flexibility and enables the reproduction of numerous existing and future workflows. The connection to Novell eDirectory and Microsoft Active Directory Services offers businesses unified, centralized management of all workflows such as user data, thereby considerably reducing administrative expenditures. Thanks to icoya TREX-Connection, published icoya OpenContent information can be reviewed and categorized within the knowledge management of the SAP Enterprise Portal. Portal users can, therefore, directly access documents in icoya. Over and above that, different Portal views are customized by each business.

icoya OpenContent for SAP Enterprise Portal distinguishes itself with enormous and extensive functionality at little cost. For business customers, this yields a considerable savings potential both in low investment cost and optimal ROI.

icoya OpenContent, struktur AG's base product, has rapidly become one of the market's leading web content management systems with clients in more than 20 countries spanning every continent. Worldwide, more than 1000 companies and public offices establish web-based information management with icoya OpenContent.

■ ■ Overview of icoya OpenContent for SAP Enterprise Portal Integration:

- Single-Sign-On with Logon Ticket over companywide user and role management (for example: Novell, eDirectory, Microsoft Active Directory, (Open)LDAP).
- Complete connection to TREX search engine for the SAP Enterprise Portal.
- Automatic adjustment of the icoya user surface area to the SAP Enterprise Portal (Portal Skinning).
- Compilation of content over WYSIWYG Editor and web forms.
- Integration of MS-Office, StarOffice, and OpenOffice on XML basis (optional).
- Single-Sign-On with SAP Logon Ticket – requiring no user mapping.
- WebDAV access to content in icoya OpenContent based on access roles.
- WebDAV check-in / -out with guaranteed document integrity.
- SAP Enterprise Portal and icoya OpenContent utilize the same authentication server for the management of roles and access rights.
